

SNN Tribal Partnerships

Partnerships combine the assets, talents and resources of participating partners to produce a dynamic and self-sustaining business.

While partnerships may be controlled by provisions of grants, or other agreements, basic elements usually include:

SNN Provides:

- ▶ *Proprietary Systems:* providing wireless systems and support hardware.
- ▶ *Technical Support:* network design and construction
- ▶ *Ongoing Support:* sales, operations, engineering, billing & administrative.
- ▶ *Content:* educational, health & life-improvement content.

Tribal Partners Provide:

- ▶ *Land/Facilities:* sites to build towers, existing structures.
- ▶ *Government:* licenses, permits and concessions.
- ▶ *Enterprise Operations:* day-to-day network operations.
- ▶ *Goodwill:* ongoing relations with subscribers/government agencies.

Sovereign Nations Network

Internet Access & Services for Those Living On & Off Tribal Lands

Sovereign Nations Network (SNN) teams with tribes and native-owned entities to provide low-cost, highly reliable, Internet and life-changing content and applications, to rural and remote areas, both on and off tribal lands.

This includes locations where Internet access is unavailable, expensive or unreliable, or where existing providers do not provide adequate coverage for health, education or life improvement.

High-Speed Internet Access & Meaningful Content & Applications on Tribal Lands

EdgeNet is SNN's signature program which includes assisting tribes in the design, deployment and operation of reliable and cost-effective Internet access networks, supporting content applications and services to tribal members (and others) living on tribal lands and surrounding rural areas.

EdgeNet Networks consists of an innovative integrated wireless network design which allows end-users access to the Internet 'cloud' in ways never before available in rural or remote areas.

This unique 'hybrid' network concept employs the latest in wireless technology and seamlessly combines it with advanced support systems for a fully integrated network, incorporating Internet access, backhaul, transport and distribution.

SchoolWeb is dedicated to the proposition the benefits of a good education, adequate healthcare and life-improvement opportunities should be available to all regardless of where they live.

SchoolWeb's management creates, acquires, packages and distributes meaningful education and vocational content, applications and services to students living on reservations and tribal lands throughout the United States and Canada.

The management of SNN has been providing educational and vocational content for over thirty years and is recognized as pioneers in the creation and distribution of distance learning content and life improvement services to locations throughout the world.

HealthWeb offers a complete portfolio of telemedicine-oriented products, applications and services designed to dramatically improve healthcare for people residing in rural, remote and underserved regions of tribal lands and reservations. This includes:

- ▶ *Telemedicine*: offering products and services that support modern healthcare in underserved areas.
- ▶ *At Home Health Services*: designed to add a new dimension to the level of healthcare in rural areas.
- ▶ *Health Related Content*: for professional development, certification and preventative medicine.
- ▶ *Infrastructure*: deploying energy efficient modular health clinics and rapid response telecom systems.
