

Internet Access: Delivering Content, Applications, & Services to Tribal Lands

Sovereign Nations Network, Inc.

Sovereign Nations Network, Inc. (SNN) is a Native American-owned business that designs and deploys high-speed broadband networks, carrying life-changing content, applications, and services, for education, health, and life improvement to people living on tribal lands and in the surrounding countryside.

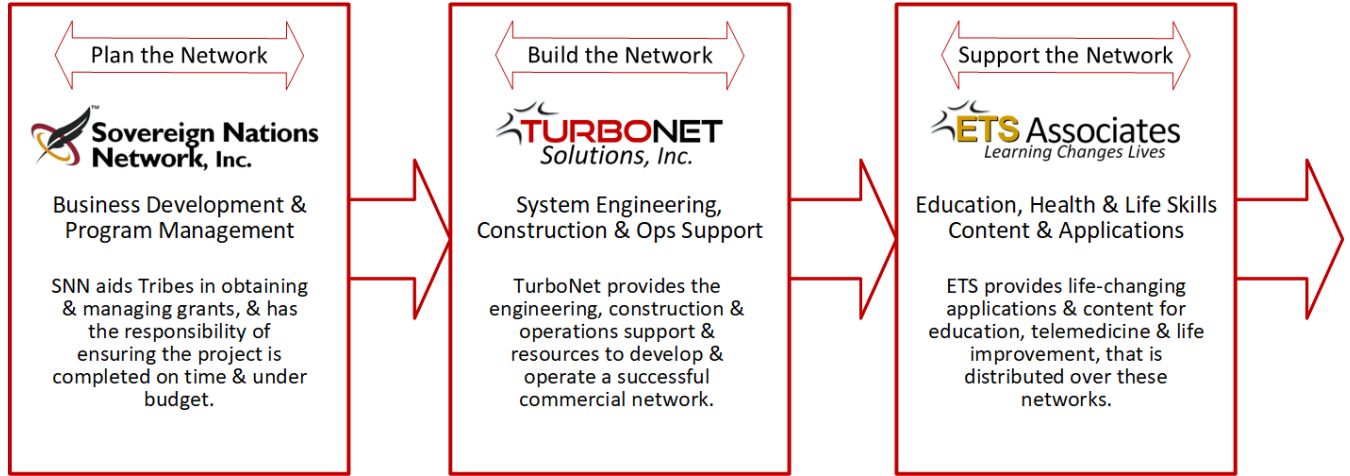

SNN teams with local tribes and native-owned companies to provide low-cost, highly reliable, Internet to rural and remote areas both on and off tribal land.

This includes locations where Internet access is not available, expensive or unreliable and where existing providers do not provide adequate coverage for video, voice and data services.

In addition, the SNN program equips a local tribe, or tribal-owned company with the tools and resources to successfully operate as a Wireless Internet Service Provider (WISP).

SNN believes educational, healthcare and life-skills content, applications and services, delivered over the Internet, can provide life-changing opportunities for people regardless of where they live.
