
TURBONET *Telecom Technical Services*

TurboNet Solutions is a provider of innovative products, applications and services designed to meet unique telecom and security technology requirements on a worldwide basis.

For over thirty-five years the management of TurboNet has been supporting the technical needs of clients worldwide. TurboNet's 'hands-on' services include a wide variety of engineering, field service and project management solutions in wireless, fiber optics, satellite, cable, security technology and broadcast television.

The TurboNet technical services team has managed complex technical projects exceeding five hundred million dollars (USD). The company has undertaken projects in many locations throughout the world, many times in remote, hard to reach and potentially hostile locations.

TurboNet Technical Services is licensed and bonded, and has a long history of bringing projects in on time and under budget.

TurboNet's Mission:

TurboNet Solutions is dedicated to providing leading-edge products, applications and services in support of the technical needs of clients who are focused on improving the lives of people in marginalized situations.

Profile

Innovative & Cost-Effective Applications & Services for Clients Worldwide

Revised: October, 2024

TurboNet Represents the Best Interest of Its Clients

TurboNet Tech has long-term relationships with some of the world's largest providers of equipment and services, allowing TurboNet Tech to provide deep discounts on equipment, hardware, software and services. However, TurboNet Tech is not obligated to use the products or services provided by these vendors if they are not appropriate to the task at hand. This means TurboNet Tech can offer a 'best-of-breed' selection in equipment, software and services tailored precisely to a client's needs, not a vendor's profit margin. The ability to be 'vendor agnostic' means TurboNet Tech can provide a client the ideal solution at the best possible cost.
